

Ali's Meeting Notes

 Tue, Jun 09, 2026 3:30PM  18:04

SPEAKERS

DADA, Sunday, Ali Muwwakkil

 DADA, Sunday 00:02
Yeah,

 Ali Muwwakkil 00:06
yeah,

 DADA, Sunday 00:07
no,

 Ali Muwwakkil 00:08
yeah. Okay, make it so I can see the whole page,

 DADA, Sunday 00:16
okay? Do a lot unless I'm scrolling. Okay, let me use a bigger screen. We have to stop sharing and share what Okay, okay, test, test, test,

A

Ali Muwwakkil 01:02

okay. okay, so when I'm done, I'm gonna make this easier on you, because I'm gonna send you the transcript, okay? And the transcript you can take and put into your cloud code environment and have it start making the changes based on the transcript that I'm going to give you. Okay, so it's going to take everything I'm saying, and then process it for you. It's going to make it a lot easier to make the changes.

D

DADA, Sunday 01:32

Okay, okay, cool, cool.

A

Ali Muwwakkil 01:33

Okay, scroll to the top, that means you don't need to take any notes or anything, you just kind of understand what I'm saying. All

D

DADA, Sunday 01:40

right,

A

Ali Muwwakkil 01:40

okay, so the fact that you're only using a small amount, that's fine. You know, I would say this. I would say this. There is a strategy around however much money you have, how much you should leverage at all times. So I want you to do research on that and figure out what those numbers are. It might say, hey, never leverage, you know, more than 4% of your account at one time. So, if you have \$100,000 account, you can never be over leveraged \$4,000 you can never have \$4,000 on in trades up to that amount, right up to whatever that percentage is, is the amount. So, if you're going to possibly get into 10 trades an evening, then you shouldn't be spending more, more than \$400 on those trades, right, or leveraging \$400 on those trades. This dashboard needs to be reformatted. Okay, it needs to overhaul. I understand you were just kind of looking and seeing and all of that, but now that you have all of the pieces in place, it needs to be more compacted, so you can get to everything within a few seconds. Okay, I think that a some type of heat map showing you the days, somehow showing you the win rate, the days, and then how much money you lost. We need to see the percentage of days where you won, the percentage of days where you lost. That's going to be very important. Yeah, so, so right now, if I understand correctly, you have to, they suggest the trades, and then you approve, okay, that's in place right now, but the majority of the foreign currency comes in in the middle of the night when we're asleep, because that's where you have activity of the banks of Europe and all of that in Asia and Japan and all of that, their most of their activity is when we're asleep. Okay, so you having to do the trades, meaning during the daytime or in the evening sometime you're probably not getting in at the optimal time,

D

DADA, Sunday 04:27

okay? Right,

A

Ali Muwwakkil 04:27

because you're getting in a place where all of the banks aren't even online, so whatever happens through news or whatever in the middle of the night, your system needs to be able to detect that, and then get into trades, and get out of trades on its own. Okay, so you want to, I would say anything above maybe like 83% confidence, you tell it, go ahead and make the trade. Go ahead and get in the trade.

D

DADA, Sunday 05:03

Okay, some of them are 85%

A

Ali Muwwakkil 05:07

as it

D

DADA, Sunday 05:08

is now. Some of them are 85% Yeah,

A

Ali Muwwakkil 05:11

that's what I was looking. So these ones that are 85 as soon as it hits, and and I would expect for this approval queue to have things popping on and off right, because 10'clock could be a good time, 130 could be a bad time, right. I would also like to see on here what the length of the trades are, right. How long are you staying in a trade on average, do you know that?

D

DADA, Sunday 05:42

No, no, no. Okay, it depends on like just anytime it is a subject.

A

Ali Muwwakkil 05:52

Okay. Well, yeah, that's going to be important, because I need to know whether this system is making more day trades, long-term trades. Is it in there for two hours? Is it in there for 30 minutes? Right, I would imagine that you're, are you closing the trades too?

D

DADA, Sunday 06:10

No, but I have the opportunity to close the trade.

A

Ali Muwwakkil 06:14

Okay, so you can control, you can control that, but right now it's closing on its own. So, opening by your approval, closing on its own.

D

DADA, Sunday 06:23

Yes.

A

Ali Muwwakkil 06:24

Okay, so we need to go to buying on its own and closing on its own.

D

DADA, Sunday 06:32

Okay,

A

Ali Muwwakkil 06:33

okay, that's going to be your full autonomy. Okay, and so yeah, we want to see some type of heat map on the days to understand how those trades went. We need to be able to have filters for the different currencies at the top. So I'm looking at your report, but if I click on, you know, the great British pound US, then it should filter the dashboard by those, so I can see just how we did for that one, because in some cases the the currencies that you trade on might not have been a good currency, right, and maybe this group of currencies does better, right? So you need to understand that. See, okay? I want to get it. I want an explanation on all of the different factors that cause them to get into the trade. Okay, so like a summary explanation, that's maybe like two or three sentences, right? I want to understand what are the reasons that it got into this trade, because that's going to be valuable information for the system when you figure out it's going to be good for your self-improvement part, okay? Because if it's saying these are the reasons, the top five reasons that I got into this trade, and it ends up being a bad trade, okay? Then we can look and see the pattern, okay? Well, every time we use oil as a factor, we end up losing, right. So maybe we need to take that out of the thought process of oil being a factor, right. And so this system has to be able to get better over time as it sees its results, so you need to collect as much information around the reason why you got into the trade, what happened in the trade, and then what happened outside the trade, because you can't replicate that unless you're doing it a lot of times, that data is not even available after the trade, right? So you gotta get all of that information for your particular use case, and then document that, and then be able to show that, so we can see there's more transparency, and we can see actual reason why.

D

DADA, Sunday 09:17

Okay, like I said, one of these, like this Euro USD is giving us a brief, just one sentence explanation. Why he's choosing this is that what you are talking about,

A

Ali Muwwakkil 09:32

more detail than this, but this brings me to a good point. I want to see for USD or for for for euro usd I want to see what's it looking like short term. How's it been moving, like maybe like a sparkline chart?

D

DADA, Sunday 09:51

Okay, has it been

A

Ali Muwwakkil 09:51

moving in the past seven days? How's it been moving in the past 30 days? How's it been moving in the past, you know, whatever week, and then maybe some type of heat map plus sparkline chart to show you what's the trend been. Okay, how are we doing on those trades to those particular currencies? Scroll down,

D

DADA, Sunday 10:21

so one more thing. When you say document, where do I document them? Is it because, like, it is now? It is giving me explanation, but after the trades, I don't have access to the information. Yeah, so

A

Ali Muwwakkil 10:35

the information you need to tell your system, hey, some of this information we need to store. Okay, so figure out how we can analyze this data and for self improvement and getting better. And then save that data as you're going through this process, so it'll, it'll create you a database, it will create the table structures, and then as the trades are happening, it'll log in everything that you need. Okay.

D

DADA, Sunday 11:07

Okay.

A

Ali Muwwakkil 11:10

All right. Is this all that's left? Is the approval?

D

DADA, Sunday 11:14

No, as we are talking, is suggesting a lot of trades. yeah,

A

Ali Muwwakkil 11:24

you definitely.. I don't see it. I would, yeah, I need to see once you automate the insertion of trades, you're going to need to have some type of autonomy page, okay, which is going to be your settings page, right, where you autonomy, autonomy page settings,

D

DADA, Sunday 11:55

autonomy settings

A

Ali Muwwakkil 11:57

page, okay, because if this thing is getting in and out of trade, that means it's autonomous. Okay, and so at that point you've lost control, so you need a settings panel.

D

DADA, Sunday 12:11

Okay,

A

Ali Muwwakkil 12:11

settings page, okay? If you want to make it more restrictive, then instead of 80% you move the needle to 85%

D

DADA, Sunday 12:23

okay?

A

Ali Muwwakkil 12:24

Right, you have to be 85% certain before you can get into a trade, or you have to be 90% because I want to, I want to lower the amount of trades, so I'm going to increase the threshold, right, and so ask your system, what are these different autonomous checks that I can have in this, and build me out a settings page, so I can be able to control, like you, I'm looking at what looks like 40 or 50 trades, that is suggesting, and I don't think you want to get into 40 trades in one day, right? Ideally, right. So, ideally, you want to get into no more than like 10 trades in the evening, the best, best 10 trades, and that might cause you to have to up your confidence to 90% right? Because you want only the best, and you want a lower amount of trades than what is giving you now, so you up the, you up the qualification to get into the trade. Okay, so yeah, let's let's do those, and then once you get that, I'm gonna send you this transcript. Once you get all of that built, then just schedule another meeting with me, and then just give me the demo, and show me what you show me what you have. Okay,

D

DADA, Sunday 14:05

okay. So any comment on the other ones?

A

Ali Muwwakkil 14:12

Okay, show me which ones that I didn't do. You know,

D

DADA, Sunday 14:15

this one is just telling us, like, how many trades AI proposed, and the amin has been

A

Ali Muwwakkil 14:24

so that's a lot. I would want to see proposed per night. Okay, percentage approved looks like your win rate is not calculating, your average profit is not calculating, so you need to update those, I yeah, yeah, go with those changes that I gave you so far. I think that'd be enough to kind of overhaul this, like put everything in more of a compact state, so you can see what's going on, and then continue to read run your trades. Now, what I would like to see is a weekly, a nightly report. Okay, build a nightly report that lets you know what trades you got into, how much money you made, right? Like, create a dashboard that will show all of that information, and again, you're doing all of this through your prompt, okay? And so you can tell it, hey, set up a job to, you know, run this at 6am Monday through Friday, okay? To let me know, or whatever the trading days, but let me know what the previous night looked like, because you should be going to sleep, maybe it got into one trade, maybe two trades before you went to sleep. By the time you wake up, you should see 678, more trades that you got in and out of that night, so then if you automate your report to hit it like 6o'clock in the morning every day, you wake up, boom, you got that report, you can see exactly what happened the previous evening, right?

D

DADA, Sunday 16:12

Okay, similar thing is there, but I will update that, as I said, like this one that I just downloaded now is giving us the total close trades. I just downloaded it now, and then these are the things it is giving, like the accurate rate, profitable recommendations, and so

A

Ali Muwwakkil 16:41

I'll look, and I'll look, I'll dig into the stats once I see the consistency. So we, I want you to automate the getting into the trades, overhaul the dashboard, and then I want to see what your results look like. Then, okay, and then we can start getting into the data, but I gotta see this thing consistently winning night in and night out. I don't think that the way it's set up right now, I wouldn't put much stock in your results right now, because you're turning them on, you know, when you feel like it. So it's not, it's not simulating a real environment. I want to simulate the real environment and see what your results are, and go from there.

D

DADA, Sunday 17:23

Okay, okay,

A

Ali Muwwakkil 17:24

okay.

D DADA, Sunday 17:25
Good.

A Ali Muwwakkil 17:26
All right, man. Talk to you later.

D DADA, Sunday 17:27
I have a question. Yeah, I submitted my Power BI stresses to fall to a month now. She didn't reply. I don't know why

A Ali Muwwakkil 17:41
she's off today, but tag her again and tag me on it,

D DADA, Sunday 17:46
okay? And

A Ali Muwwakkil 17:47
I'll make sure that she gets to it tomorrow.

D DADA, Sunday 17:50
Thank you.

A Ali Muwwakkil 17:52
Okay. All right, I will upload the transcript to your ticket, okay?

DADA, Sunday 17:57

Okay, thank you.

Ali Muwwakkil 17:58

Okay, talk to you later.

17:59

so.
